Improving the Hospital Environment by Reducing the Bioburden
Hospitals are making the right decisions when it comes to preventing infections, but there is one area that is often overlooked. There is an *Invisible Threat* that travels throughout facilities, impacts patient care, employee retention and even creates financial risk.

The American Journal of Infection Control recently cited a study that detailed how airborne dispersion of pathogens can be rapid, widespread and difficult to prevent. Hospital air can also be a potential route for transmission of pathogenic aerosols like Methicillin resistant Staphylococcus aureus and C. difficile.

Options to combat this threat were limited; before **VIDASHIELD™**.

**JOIN LEADING HOSPITALS IN BATTLING THE INVISIBLE THREAT**

Leading hospitals are combatting contaminated air with a proven, patented UV-C air purification system uniquely designed inside a lighting fixture called **VIDASHIELD**.

Housed in a shielded UV chamber in the ceiling and ideally located for maximum effectiveness, **VIDASHIELD** continuously reduces harmful bacteria and fungi from treated air while improving air quality and minimizing odors.
Accepted protocols to address surface contamination are based on episodic cleaning and while hospitals are very diligent in their disinfection procedures, the time between and the quality of cleaning affects the risk. Eliminates 100% of human error.

VIDASHIELD effectively fills the gap created when terminal cleaning isn’t an option. Protect patients and staff from The Invisible Threat of contaminated air posed by episodic cleaning.
VIDASHIELD is ideal for use in critical care areas with the highest risk of HAIs – where proper cleaning can be difficult and crowds may limit access for terminal cleaning devices.

VIDASHIELD reduces the levels of bacteria and fungi in treated air and reduces the settling of viable bacteria and fungi from treated air onto surfaces.

In a recent patient outcome study, a long term acute care hospital in Kentucky reported a 60% reduction in their overall infection rates.\(^5\)
Available in Three Models

A highly reflective, sealed UV-C chamber houses the UV lamp above the ceiling out of harm’s way. No UV light leaks out of the VidaShield system, allowing for use in occupied spaces.

**VIDASHIELD SYSTEM DETAILS**
- **System:** Energy efficient
- **Installation:** Easy; does not upset HVAC system
- **Dimensions:** 24” wide x 48” long x 6” high (UV chamber included)
- **Weight:** 44 lbs.
- **Voltage:** Universal 110-277v
- **UV Lamp:** Ultraviolet germicidal lamp operates at peak wavelength of 254nm, doesn’t produce ozone
- **Annual Maintenance:** UV lamp
- **Other Maintenance:** MERV 6 filter replacement every 3 months

3 Year Limited Warranty
